Education

Passionate Full-Stack Developer

I am a student at Brigham Young University-Idaho obtaining a degree in Software Development. My interest in programming began a few years ago when I took an intensive course in full-stack developing. Upon my completion of the course, I started my first job as a developer at the company Afore-Coppel where I was able to gain many coding skills from real-world experiences. One of my biggest aspirations is to work for a company like Microsoft or Intel - leaders of technological innovation. Following this dream, I decided to move to the United States where I began working for a local startup that enables small to medium sized businesses to systemize their processes.

Willing to relocate: Anywhere
